REPOSITORY POLICY FOR ASIAN JOURNAL OF ALLIED HEALTH SCIENCES

Introduction:

This repository policy outlines the guidelines for the deposition and access of articles from our medical journal in external repositories. The purpose of this policy is to ensure the widest possible dissemination of research while maintaining the integrity of the journal and protecting the rights of authors and the journal.

Preprint Repositories:

Authors are encouraged to deposit their preprints in preprint servers or repositories before submission to our journal. Preprints are non-peer-reviewed versions of research articles that allow for early sharing of findings. Depositing preprints in recognized repositories fosters open communication and facilitates rapid dissemination of research within the scientific community.

Post-Publication Repositories:

After publication in our medical journal, authors are permitted to deposit the accepted version of their article or the final published version in post-publication repositories or institutional repositories. This allows for broader access to the published research and increases its visibility and impact.

Embargo Period:

To maintain the value and uniqueness of content published in our journal, there may be an embargo period before authors can deposit their articles in external repositories. During this embargo period, access to the article is restricted to the journal's platform. The length of the embargo period will be specified by the journal and communicated to the authors upon acceptance of their articles.

Version and Access:

Authors may deposit the accepted version of their article, also known as the post-peer-review version or the author's final manuscript, in repositories. Depending on the journal's policies and

agreements with repositories, authors may also be able to deposit the final published version (PDF) after the embargo period has elapsed. The repository must provide clear and visible links to the official version of the article on the journal's platform.

Licensing and Copyright:

Authors must ensure that they comply with the journal's licensing policy when depositing their articles in repositories. This includes adhering to the chosen Creative Commons license, if applicable, and providing appropriate attribution to the journal. The journal's copyright and ownership policies remain in effect, and authors retain their rights as outlined in the licensing policy.

Metadata and Linking:

Authors are responsible for providing accurate and complete metadata when depositing their articles in repositories. This includes essential information such as the article title, authors' names, abstract, keywords, journal name, volume, issue, page numbers, DOI (Digital Object Identifier), and a direct link to the official version on the journal's platform. Authors should also ensure that the article is discoverable by assigning appropriate subject classifications and keywords.

Compliance with Repository Policies:

Authors must comply with the policies and guidelines of the respective repositories when depositing their articles. This includes adhering to any embargo periods, formatting requirements, and copyright regulations set by the repositories. Authors should familiarize themselves with the repository's terms of service and ensure their actions align with both the journal's policy and the repository's guidelines.

Updates to Repository Policy:

This repository policy may be revised or updated as necessary to align with changes in the publishing landscape or the journal's requirements. Authors should consult the most recent version of the policy to ensure compliance. Updates will be communicated through the journal's website or other appropriate channels.

Contact Information:

For any questions or inquiries related to the repository policy, authors can contact the journal's editorial office using the provided contact details on the journal's website.
